Firebreak 22 Fire Resistant Acoustic Sealant

TECHNICAL DATA SHEET

Firebreak 22 is an easy-to-apply, highly flexible polymer emulsion sealant designed to provide fire protection wherever internal low movement and/or acoustic joints are required. When exposed to high temperature it swells to form a durable char that restricts the passage of smoke and fire for up to 4 hours.

Description

Firebreak 22 is a halogen-free, polymer emulsion based sealant that swells when subjected to temperatures in excess of 125°C to form a durable char that restricts the passage of smoke and fire. It is easy to apply and is designed for internal use wherever low movement fire resistant and/or acoustic joints are required.

In addition, it has also been extensively fire tested to provide fire seals around a wide range of pipe and cable service penetrations through fire compartmenting floors and walls including 100mm thick flexible (plasterboard) partitions.

Performance

Firebreak 22 has been tested to the latest European requirements for applications in walls and floors. Testing to other national standards is also available.

- Fire classification to EN 13501-2 and CE Mark (ETA 21/0222 & 21/0213)
- Flexible Walls (stud partitions) or rigid walls (masonry, concrete) of 100mm minimum thickness

- Rigid (concrete) floors of 150mm minimum thickness
- Tested in conjunction with a wide range of common construction materials including masonry, steel, wood, bunched telecommunications cables, large power cables and steel and copper pipes
- +/- 12.5% movement capability (conforms to ISO 11600 F 12.5P)
- Mechanical and durability testing to EAD 350454-001104 & EAD 350141-00-1106;
 Z₂ (0/+70°C) (internal use with temperature range of 0°C to +40°C and high humidity)
- Third party product certification with UL International (Certificate # UL-EU-00597)
- Sound insulation: Rw up to 59dB (BS EN ISO 10140-2: 2010
- Zero flame spread when tested to EN ISO 11925-2: 2010 giving Class E classification to EN 13501-1:2007 + A1

 VOC Emissions Classification: M1 (highest European classification)

Other properties

- Colour: White (other colours available in minimum order quantities)
- Specific gravity: 1.60 1.64
- Skinning time: 15 to 60 minutes depending on conditions
- Cure time: 5 to 15 days for a 20 x 15mm bead
- Hardness (Shore A): 25 30
- Painting: Can be over painted with most paints once fully cured

Packaging schedule

ltem	Pack size (ml)	Items per box	Boxes per pallet Items per pallet			allet
			Standard 4-way (1.2 x 1m)	Euro (1.2 x 0.8m)	Standard 4-way (1.2 x 1m)	Euro (1.2 x 0.8m)
Cartridge	310	25	64	48	1600	1200
Cartridge	310	12	132	100	1584	1200
Foil	600	12	78	72	936	864

Supply, packaging and usage

Firebreak 22 is normally supplied in 310ml cartridges or 600ml foil packs. It can also be supplied in 5, 10, 15 or 19 litre tubs to order.

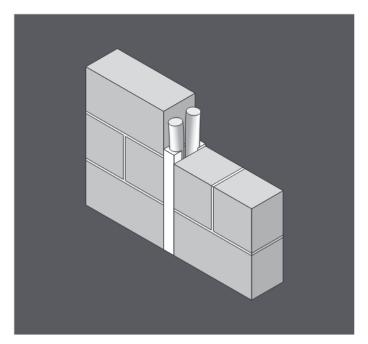

The quantity of material required to seal a linear gap without allowance for wastage can

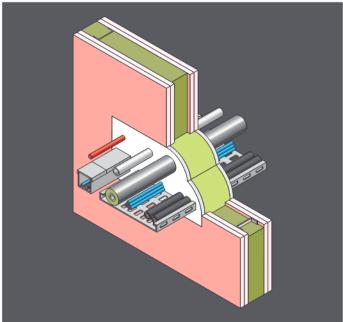

be calculated using the following equations with all dimensions measured in cm:

Gap width x seal depth x gap length/310 = number of 310ml cartridges required

Gap width x seal depth x gap length/600 = number of 600ml foils required

Note: Multiply by 2 where seal is to both faces of separating structure.

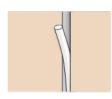

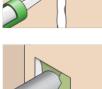

Installation

- Ensure contact surfaces are clean, dry and dust free
- Apply between 5°C and 40°C

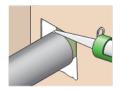

Linear gaps

- For linear gap applications insert backer rod or stone mineral wool, as determined by seal design, into the gap with a friction fit in order to control the required minimum depth of sealant
- Gun the sealant into the gap ensuring that the gap is fully filled and tool the surface smooth within 15 minutes using a dry pallet knife or spatula

Service penetrations

 For service penetration seals pack stone mineral wool tightly around and between the services such that the opening is fully filled but leaving sufficient space at each face to apply the required minimum depth of sealant

- Gun the sealant across the exposed faces of the seal ensuring that it is fully filled and tool the surface smooth within 15 minutes using a dry pallet knife or spatula
- Clean tools after use using water

Maintenance

No routine maintenance is required although periodic inspection for possible damage is recommended. All penetrations seals which are subsequently modified should be made good using Firebreak 22.

Storage

It is recommended to store in dry conditions between 5°C and 25°C.

Shelf life

24 months for unopened containers when stored under recommended storage conditions.

Health and safety

Please refer to safety data sheet before use.

Since the product is applied under circumstances beyond our control, Neutron Fire Technologies Limited can accept no direct or consequential liability whether in contract or in tort, for the interpretations of such recommendations and reserves the right to modify the recommendations as necessary.
